

COVERED CALL STRATEGY

A SHARED APPROACH TO UNCOVERING OPPORTUNITIES

Objective

The Covered Call Strategy objective is to provide market-like returns in rising equity markets while earning strong returns in flat or down markets.

We combine a portfolio of higher yielding stocks with a disciplined covered call strategy with a goal of providing a lower volatility total return solution for clients.

The performance data quoted represents past performance; past performance does not guarantee future results. Current performance may be lower or higher than the performance data quoted. The gross returns were calculated on a time weighted basis, including all dividends and interest, accrual income, realized and unrealized gains or losses and are net of all brokerade commussions, execution costs and do not give effect to investment advisory fees, which would reduce such returns. The net returns presented above were calculated by applying the highest institutional investment, advisory fees, which would reduce such returns. The net returns presented above were calculated by applying the highest institutional investment, advisory fees, which would reduce such returns. The net returns presented above were calculated by applying the highest institutional portfolios is: 0.50% on all additional assets. Writing covered calls may inimit the upside of a portfolio, truthermore, the income from premiums may not totally protect against loss of capital in the event of a market decline. Options are not for everyone, and they do involve risk. Historically, dividend vields have been relatively constant and therefore have created a custion for investors when stock prices have declined. However, as with all equity investing, there is the risk that a company will not achieve its expected earnings results, or that an unexpected change in the market or within the company will occur, poth of which may adversely affect investment results. The biggest risk of equity investing is that returns can fluctuate and investors can lose money.

The S&P 500 Index is the primary index for this strategy. The S&P 500 Index returns are provided to represent the investment environment existing during the time periods shown. For comparison purposes, the index is tully invested and includes the reinvestment of income. The returns for the index of not include any trading costs, management fees, or other costs. Index returns have been taken from published sources. The Covered Call composite was initially created in July 2008 and includes, all fee paying, discretionary accounts with comparable investment of income. The returns for the index of not include any trading costs, management fees, or other costs. Index returns have been taken from published sources. The Covered Call composite was initially created in July 2008 and includes, all fee paying, discretionary accounts with comparable investment objectives and a market value in excess of \$250,000. Market capitalizations of \$250,000 and above are generally included in this strategy. This strategy focuses on U.S. equity securities that have strong and/or improving fundamentals with reasonable valuations. The equity portfolio will have a meaningful yield premium to the market. In addition, on a potional basis, options on individual stocks or market-based in Jus. Dollars, composite dispersion is calculated using the asset-weighted standard deviation method, which determines the dollar weighted mean return using the benchmark related eviation measures the variability of the composite and the benchmark relatives. The three-year annualized deviation measures the variability of the composite and the benchmark results. Investors should not rely on prior performance calculation methods might be performance. To receive a complete list and description of Chartwell investor should not filterent results. Investors should not rely on prior performance data as a reliable indication of future performance.
